

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A body cover for a vehicle with a saddle seat, comprising:

a cover main body disposed at a central part in a lateral direction of the vehicle, the cover main body including an upper surface to cover a vehicle body frame from above, and side wall surfaces to cover the vehicle body frame from lateral sides and oppositely spaced apart at inner side surfaces in an axial direction of two front wheels; and

fenders which are provided for covering the front wheels of the vehicle disposed at lateral sides, and which are attached to the cover main body,

wherein each of the fenders has an abutting surface abutted against a respective one of the side wall surfaces, and

the fenders are attached to the cover main body in a state in which the abutting surfaces abut against the side wall surfaces, respectively,

each of the abutting surfaces includes a front side first surface and a rear side second surface which intersect each other, and

each of the fenders is fixed to the cover main body by a rivet at a location in a rear portion of the front side first surface and adjacent to a boundary between the front side first surface and the rear side second surface.

2. (Cancelled)

3. (Cancelled)

4. (Cancelled)

5. (Currently Amended) The body cover for a vehicle with a saddle seat, according to ~~claim 3~~ claim 1, wherein the front side first surface of the abutting surface is formed with fixing holes passing through it in a lateral direction at two forward and rearward locations, and a lower location of the rear side second surface of the abutting surface is formed with an engagement piece extended in a downwardly slanted direction along the rear side second surface.

6. (Currently Amended) The body cover for a vehicle with a saddle seat, according to claim 1, wherein each of the fenders is restricted against motions and rotations in all directions by the two rivets against the ~~front~~ cover main body, resulting in each of the fenders being fixed at three locations of positions of the two rivets and an engaging piece inserted into an inserting section of the cover main body ~~cover~~.

7. (Currently Amended) A body cover for a vehicle with a saddle seat, comprising:
a cover main body disposed at a central part in a lateral direction of the vehicle, the cover main body including side wall surfaces to cover ~~the~~ a vehicle body frame from lateral sides and oppositely spaced apart at inner side surfaces in an axial direction of two front

wheels; and

fenders which are provided for covering the front wheels of the vehicle disposed at lateral sides, and which are attached to the cover main body,

~~wherein the side wall surfaces of the cover main body extend downwardly from positions where the fenders are attached to the cover main body,~~

wherein each of the fenders has an abutting surface abutted against a respective one of the side wall surfaces,

the fenders are attached to the cover main body in a state in which the abutting surfaces abut against the side wall surfaces, respectively,

each of the abutting surfaces includes a front side first surface and a rear side second surface which intersect each other, and

each of the fenders is fixed to the cover main body by a rivet at a location in a rear portion of the front side first surface and adjacent to a boundary between the front side first surface and the rear side second surface.

8. (Cancelled)

9. (Cancelled)

10. (Cancelled)

11. (Currently Amended) The body cover for a vehicle with a saddle seat, according to ~~claim 9~~ claim 7, wherein the front side first surface of the abutting surface is formed with fixing holes passing through it in a lateral direction at two forward and rearward locations, and a lower location of the rear side second surface of the abutting surface is formed with an engagement piece extended in a slant downward direction along the rear side second surface.

12. (Currently Amended) The body cover for a vehicle with a saddle seat, according to claim 7, wherein each of the fenders is restricted against motions and rotations in all directions by ~~the~~ two rivets against the ~~front~~ cover main body, resulting in each of the fenders being fixed at three locations of positions of the two rivets and an engaging piece inserted into an inserting section of the cover main body ~~cover~~.

13. (Previously Presented) The body cover for a vehicle with a saddle seat, according to claim 7, wherein the side wall surfaces of the cover main body extend downwardly below each of the fenders.

14. (Currently Amended) A body cover for a vehicle with a saddle seat, comprising:
a cover main body disposed at a central part in a lateral direction of the vehicle, the cover main body including an upper surface to cover a vehicle body frame from above, and side wall surfaces to cover the vehicle body frame from lateral sides and oppositely spaced

apart at inner side surfaces in an axial direction of two front wheels; and

fenders which are provided for covering the front wheels of the vehicle disposed at lateral sides, and which are attached to the cover main body,

wherein the side wall surfaces of the cover main body extend downward below each of the fenders,

each of the fenders has an abutting surface abutted against a respective one of the side wall surfaces,

the fenders are attached to the cover main body in a state in which the abutting surfaces abut against the side wall surfaces, respectively,

each of the abutting surfaces includes a front side first surface and a rear side second surface which intersect each other, and

each of the fenders is fixed to the cover main body by a rivet at a location in a rear portion of the front side first surface and adjacent to a boundary between the front side first surface and the rear side second surface.

15. (Cancelled)

16. (Cancelled)

17. (Cancelled)

18. (Currently Amended) The body cover for a vehicle with a saddle seat, according to ~~claim 16~~ claim 14, wherein the front side first surface of the abutting surface is formed with fixing holes passing through it in a lateral direction at two forward and rearward locations, and a lower location of the rear side second surface of the abutting surface is formed with an engagement piece extended in a downwardly slanted direction along the rear side second surface.

19. (Currently Amended) The body cover for a vehicle with a saddle seat, according to claim 14, wherein each of the fenders is restricted against motions and rotations in all directions by ~~the~~ two rivets against the ~~front~~ cover main body, resulting in each of the fenders being fixed at three locations of positions of the two rivets and an engaging piece inserted into an inserting section of the cover main body ~~cover~~.
